Stacked area – highlights

1

Supports wiggle layout

Create beautiful wiggle charts

2

Series labels

Automatically places labels inside the area

3

Flexible colors

Apply conditional colors to many elements

4

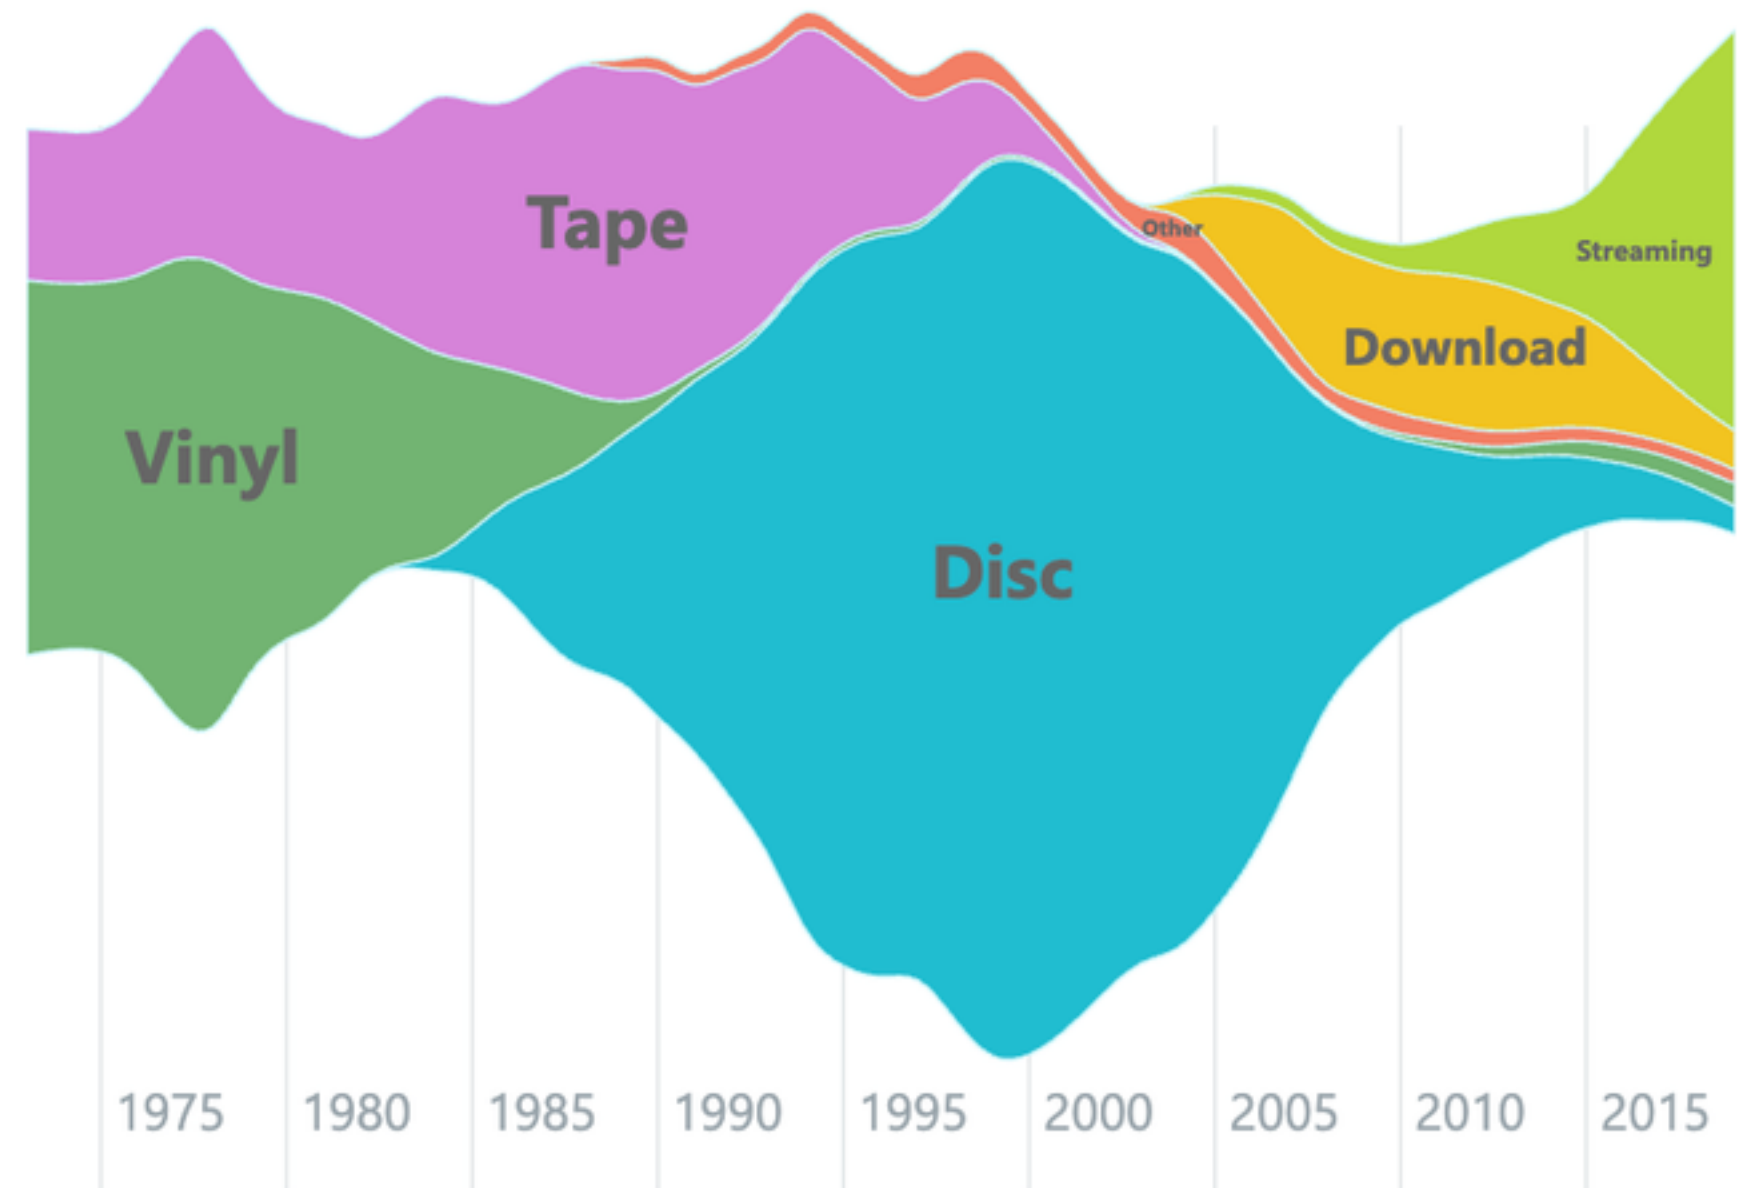

Series management

Display top N segments and aggregate all others

5

Multiple cards

Render multiple bump charts in a single visual

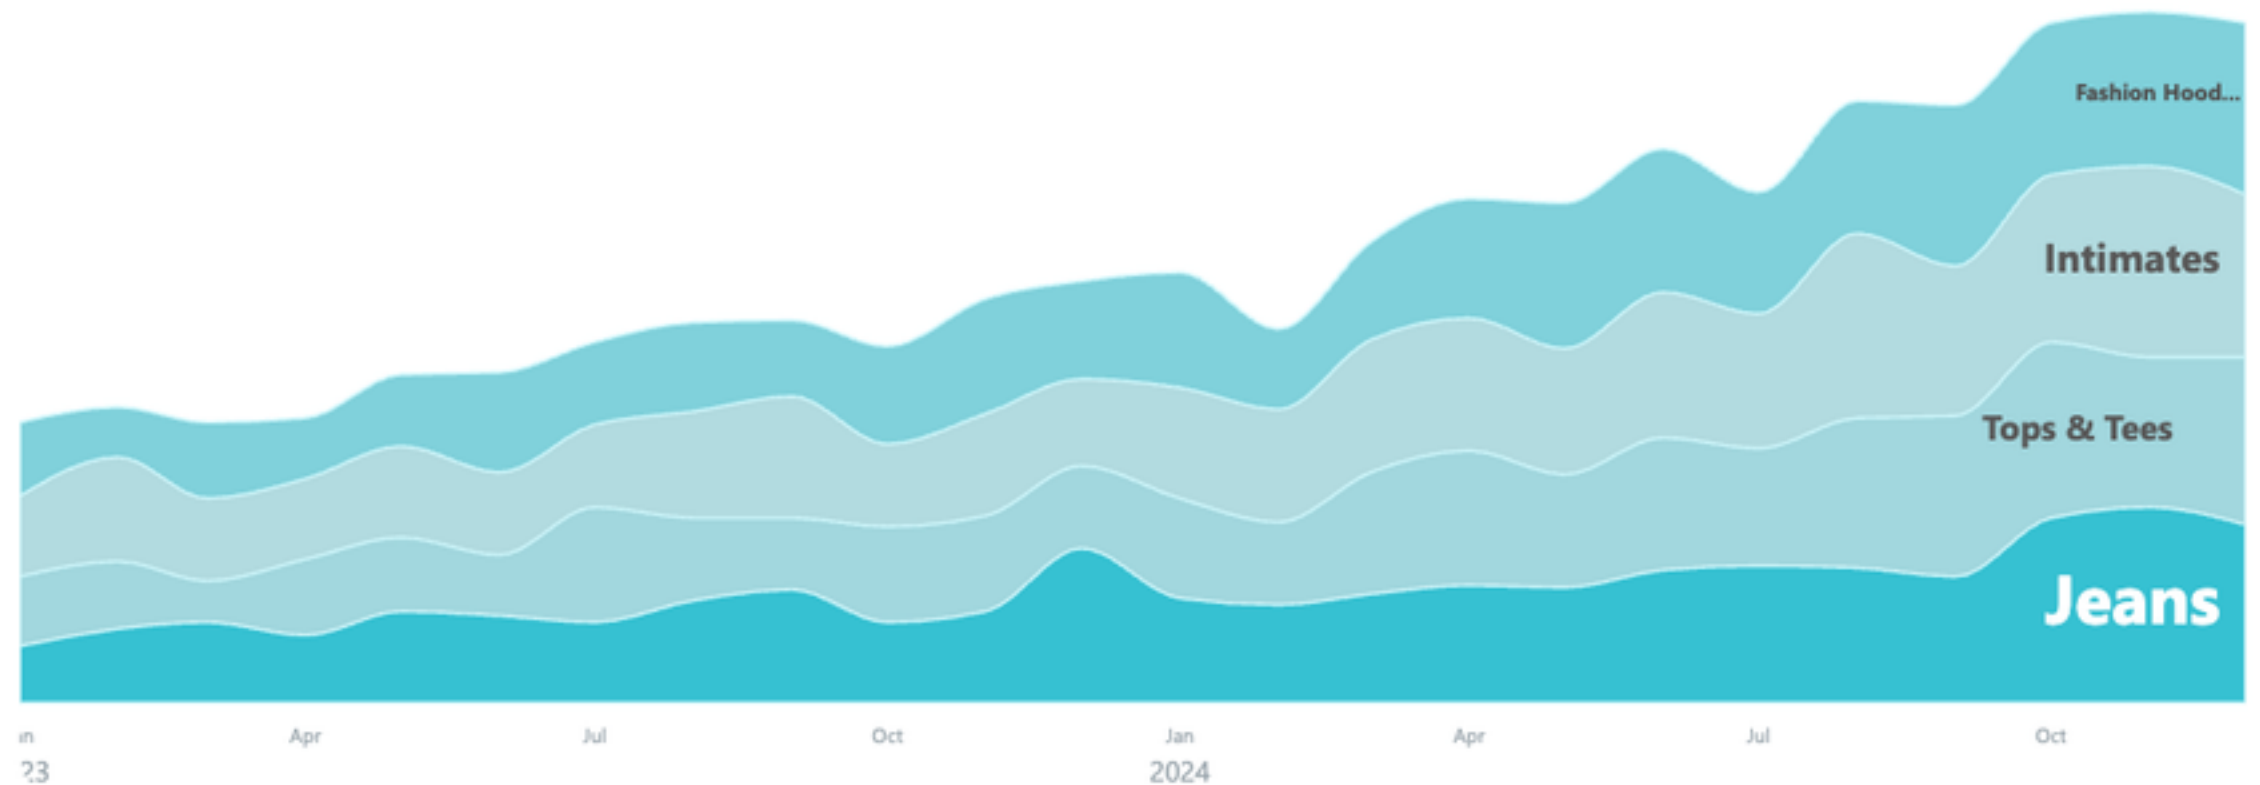

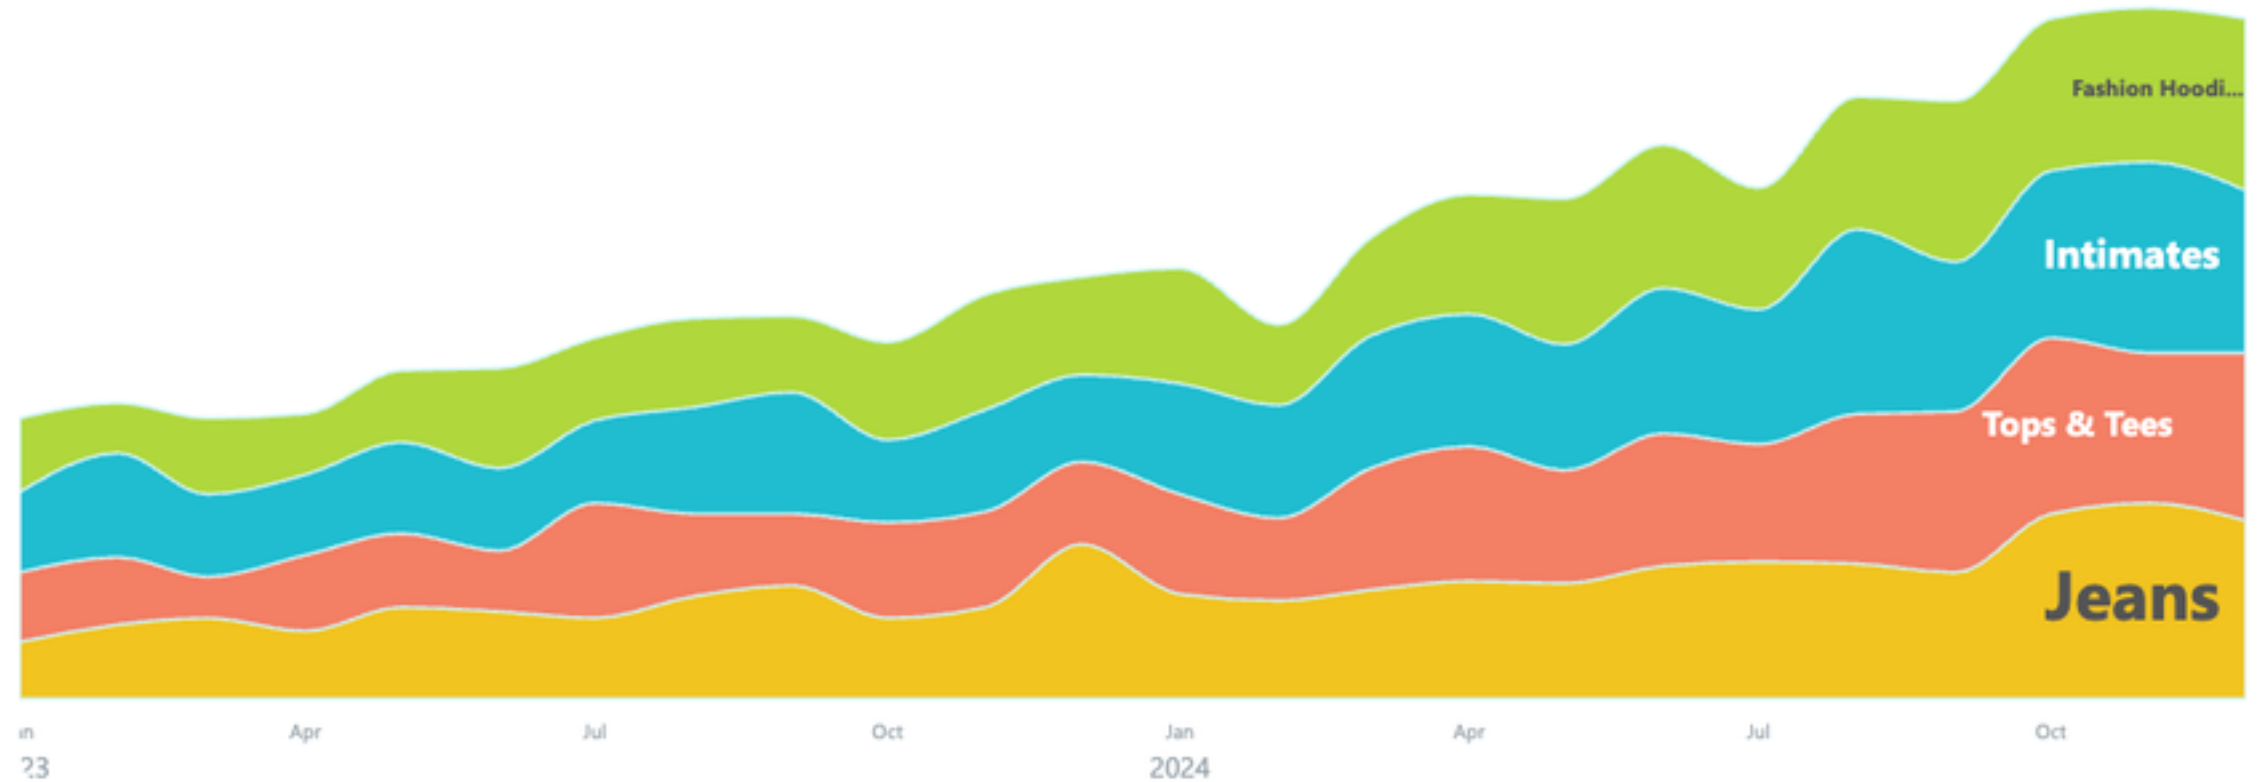

1 Stacked area – colors

Use conditional formatting to maintain consistent category colors across all visuals.

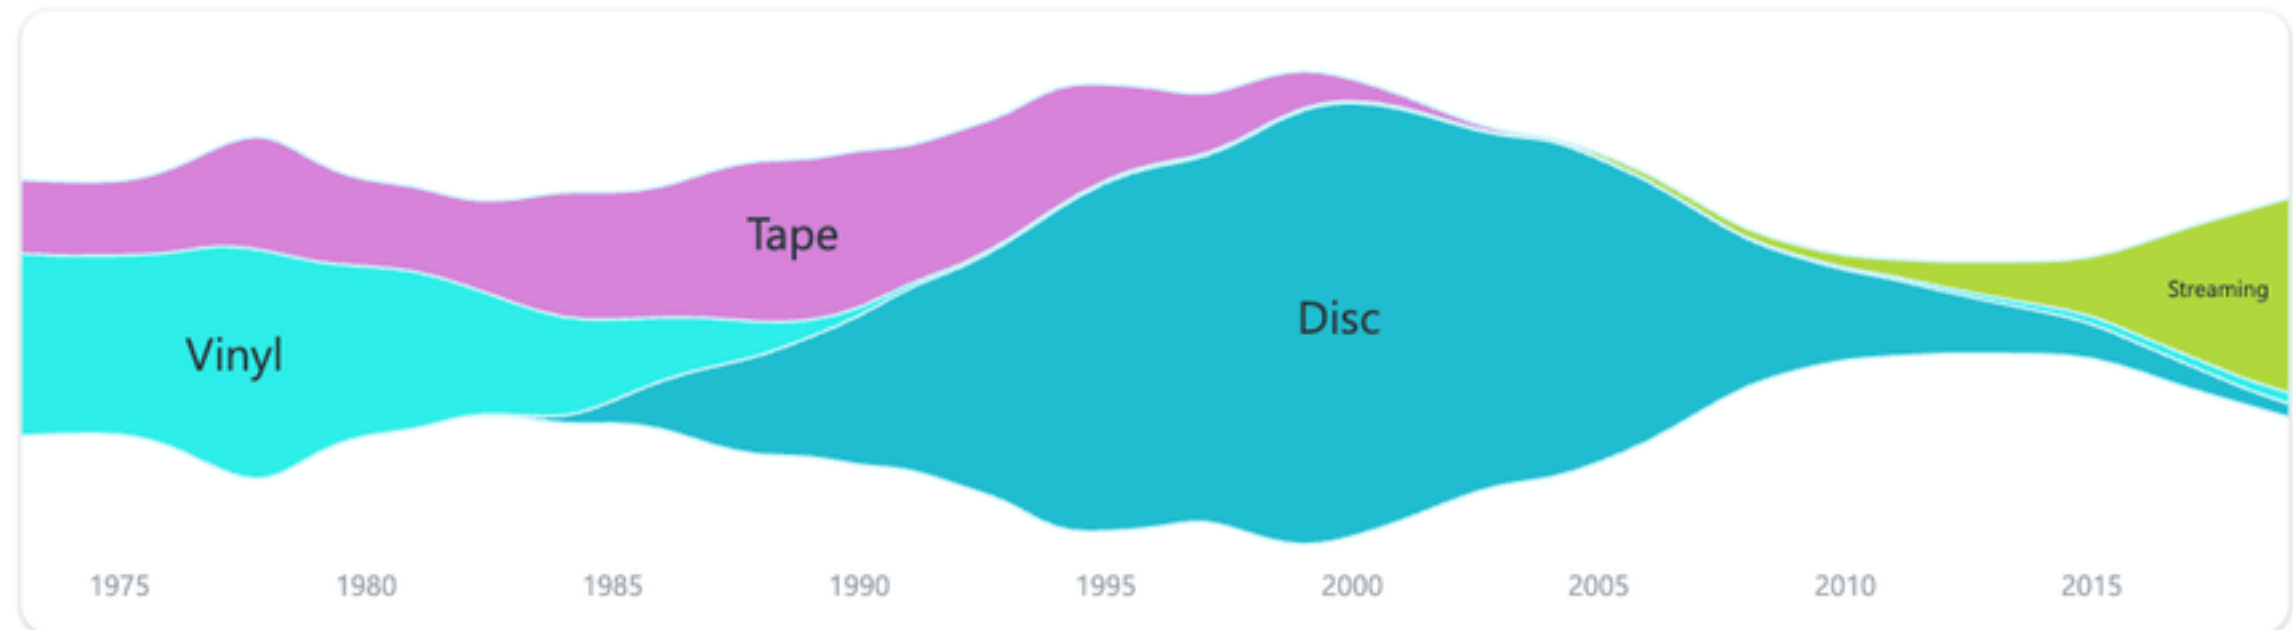

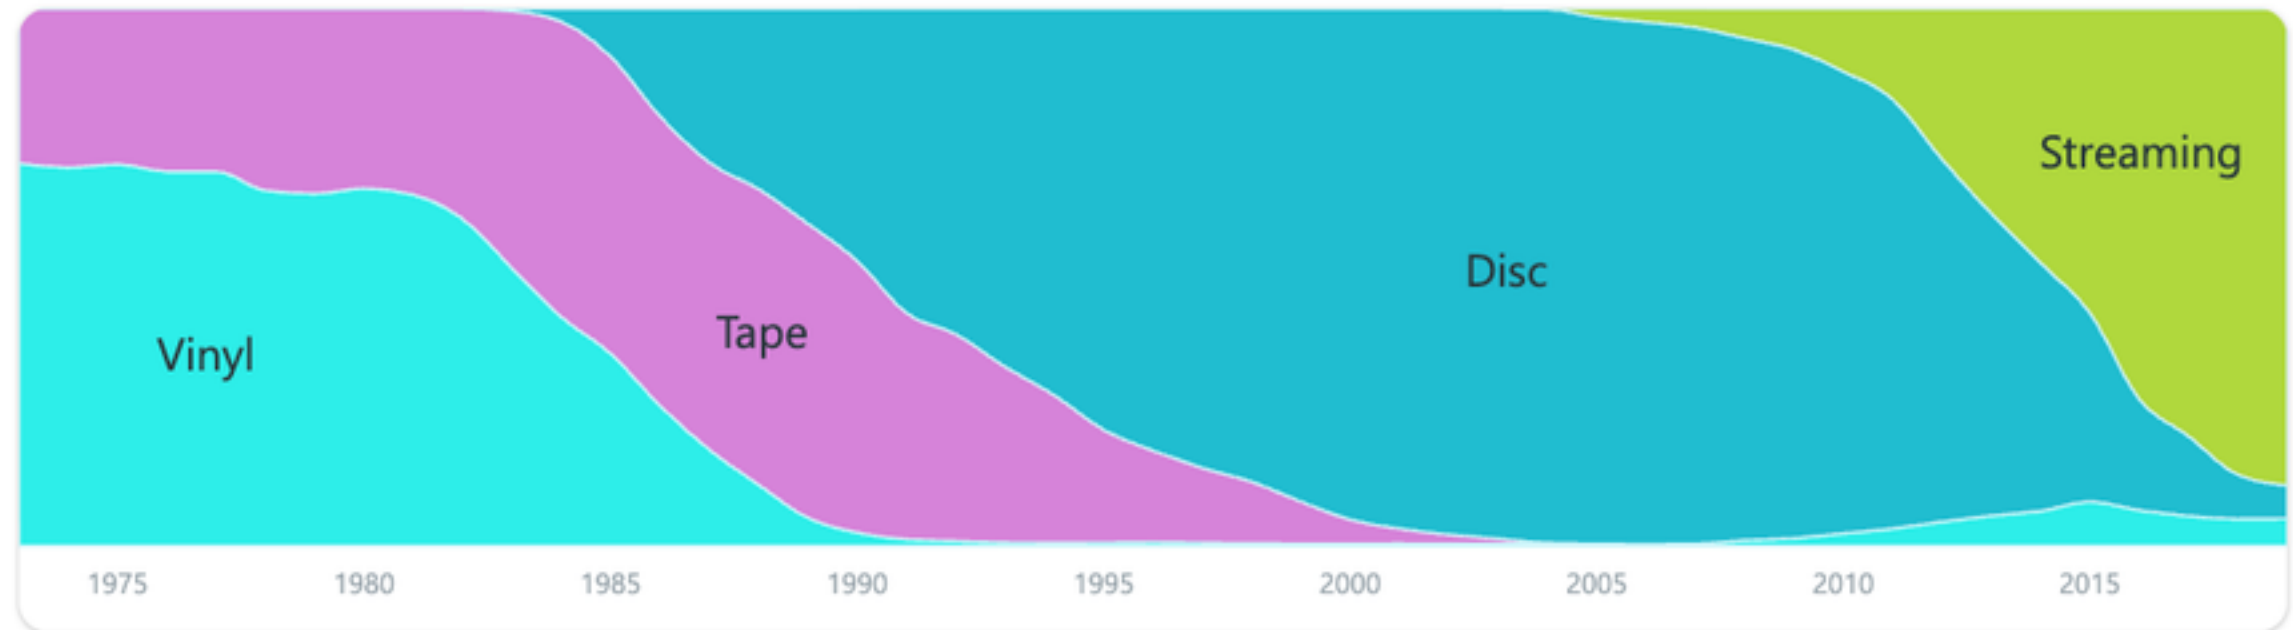

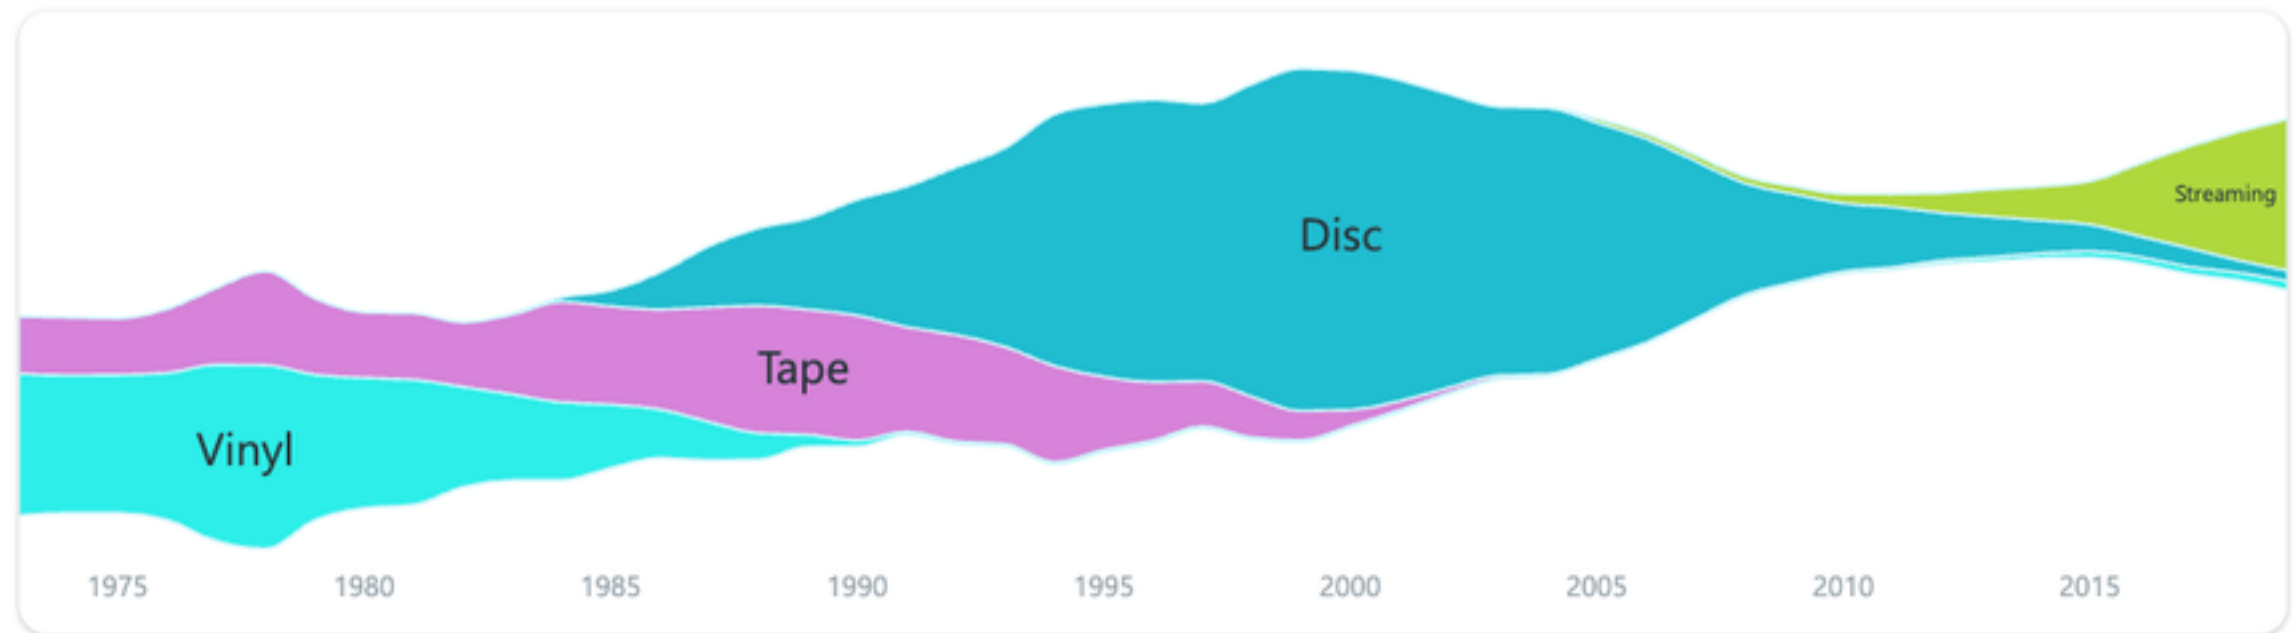

Apply gradients or individual colors to each series in a line chart for custom styling.

3 Stacked area – shapes

There are many different ways the stacks can be organized and layered.

In the Area Design section, you can change the stack type to centered, wiggle, or 100% stacked (normalized) and adjust the stack order to create different visual outcomes..

4

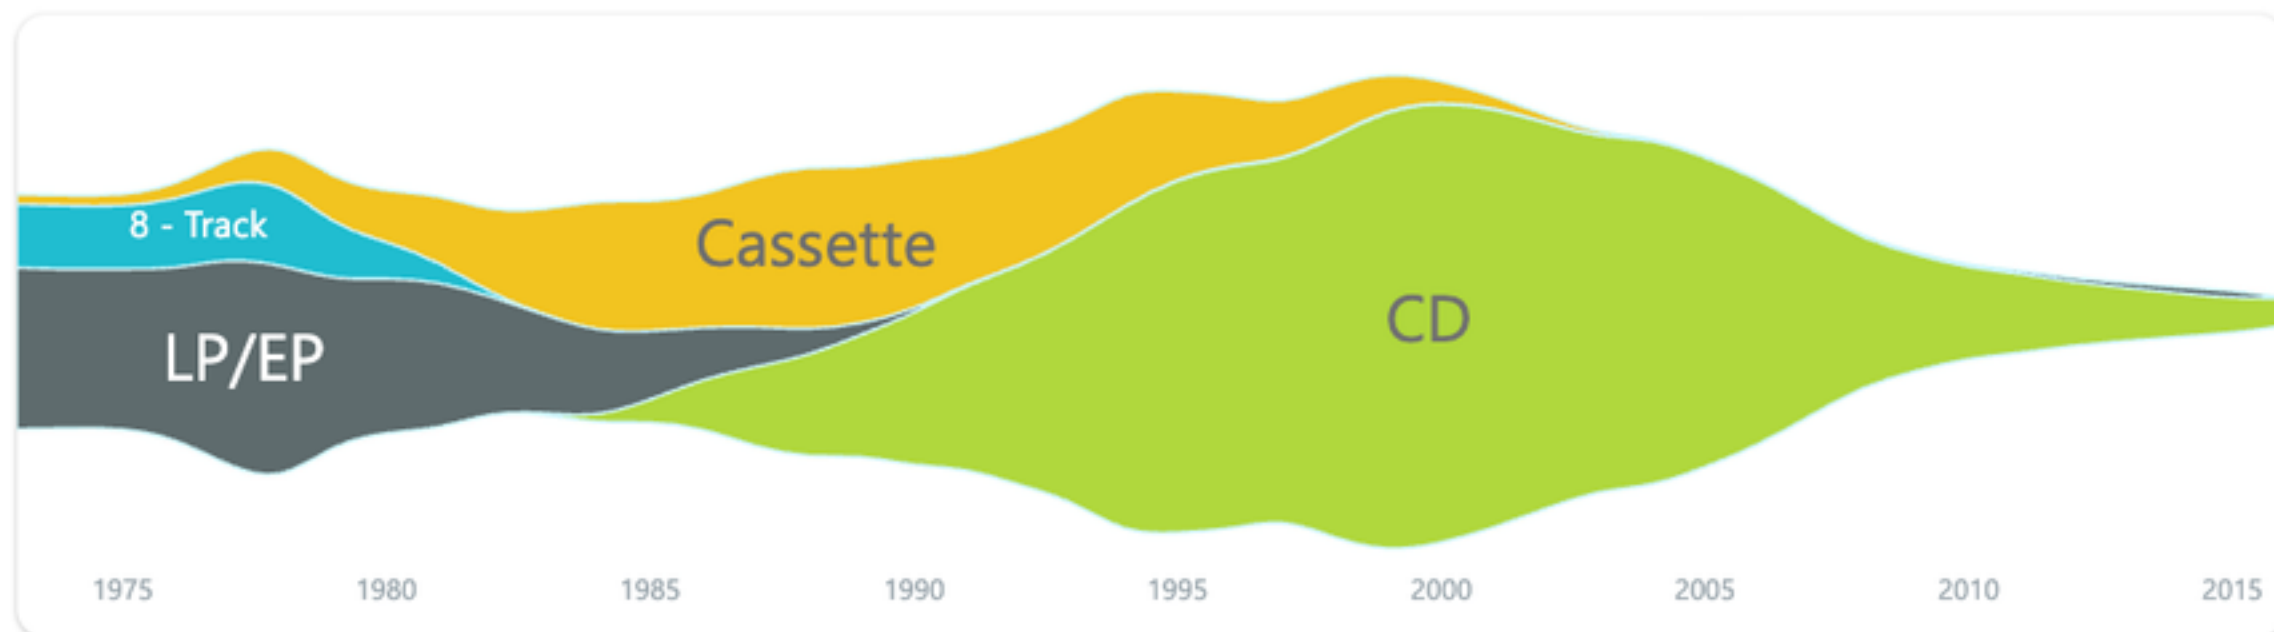

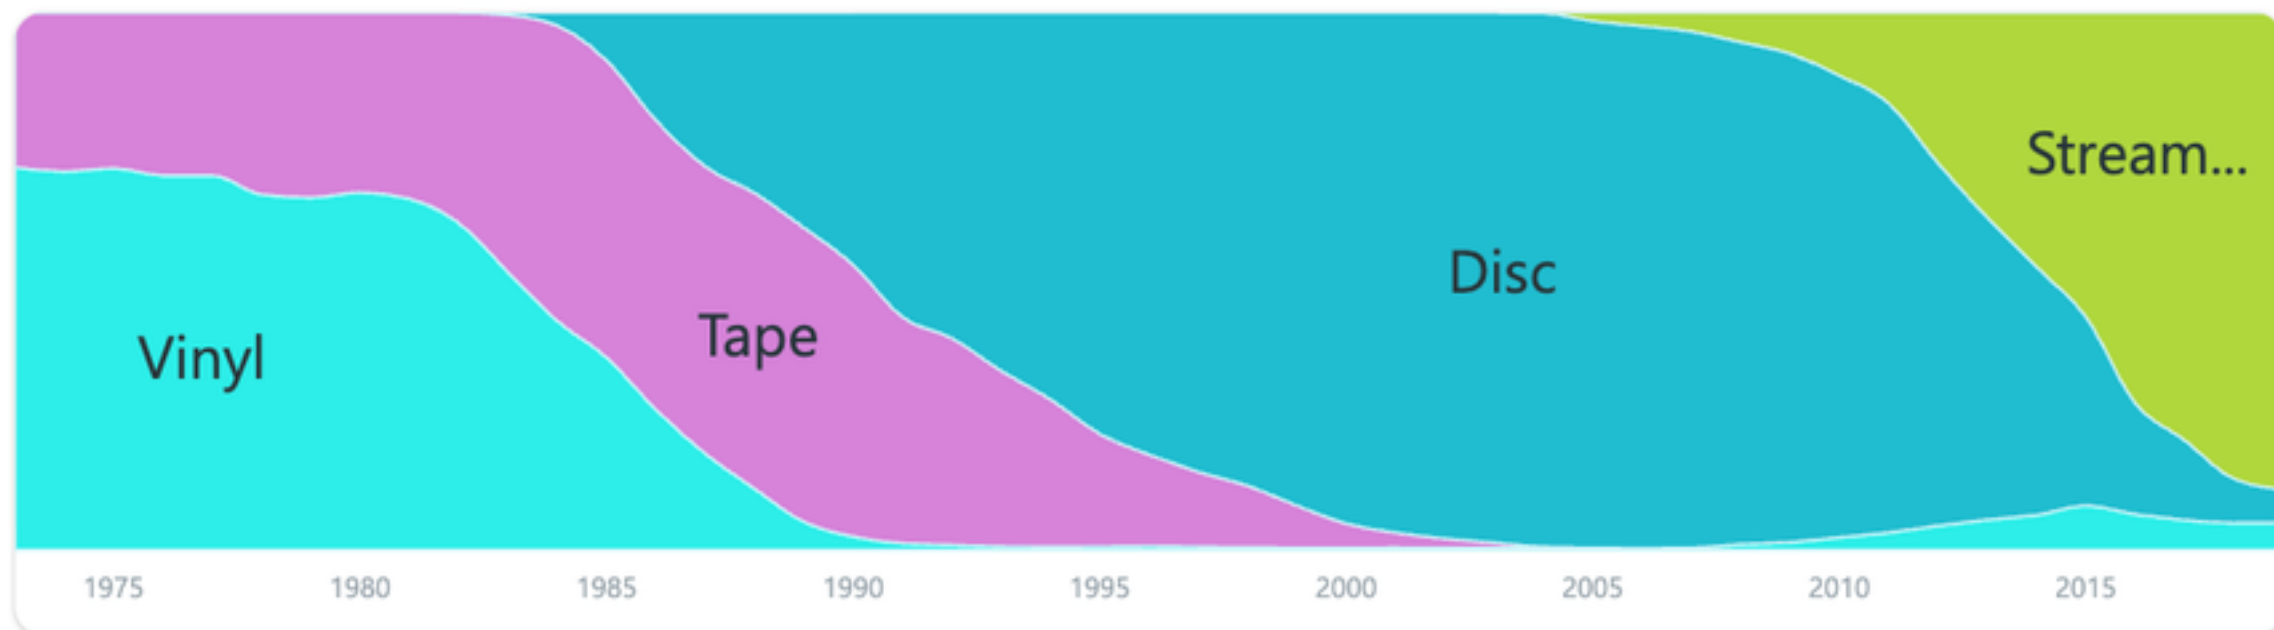

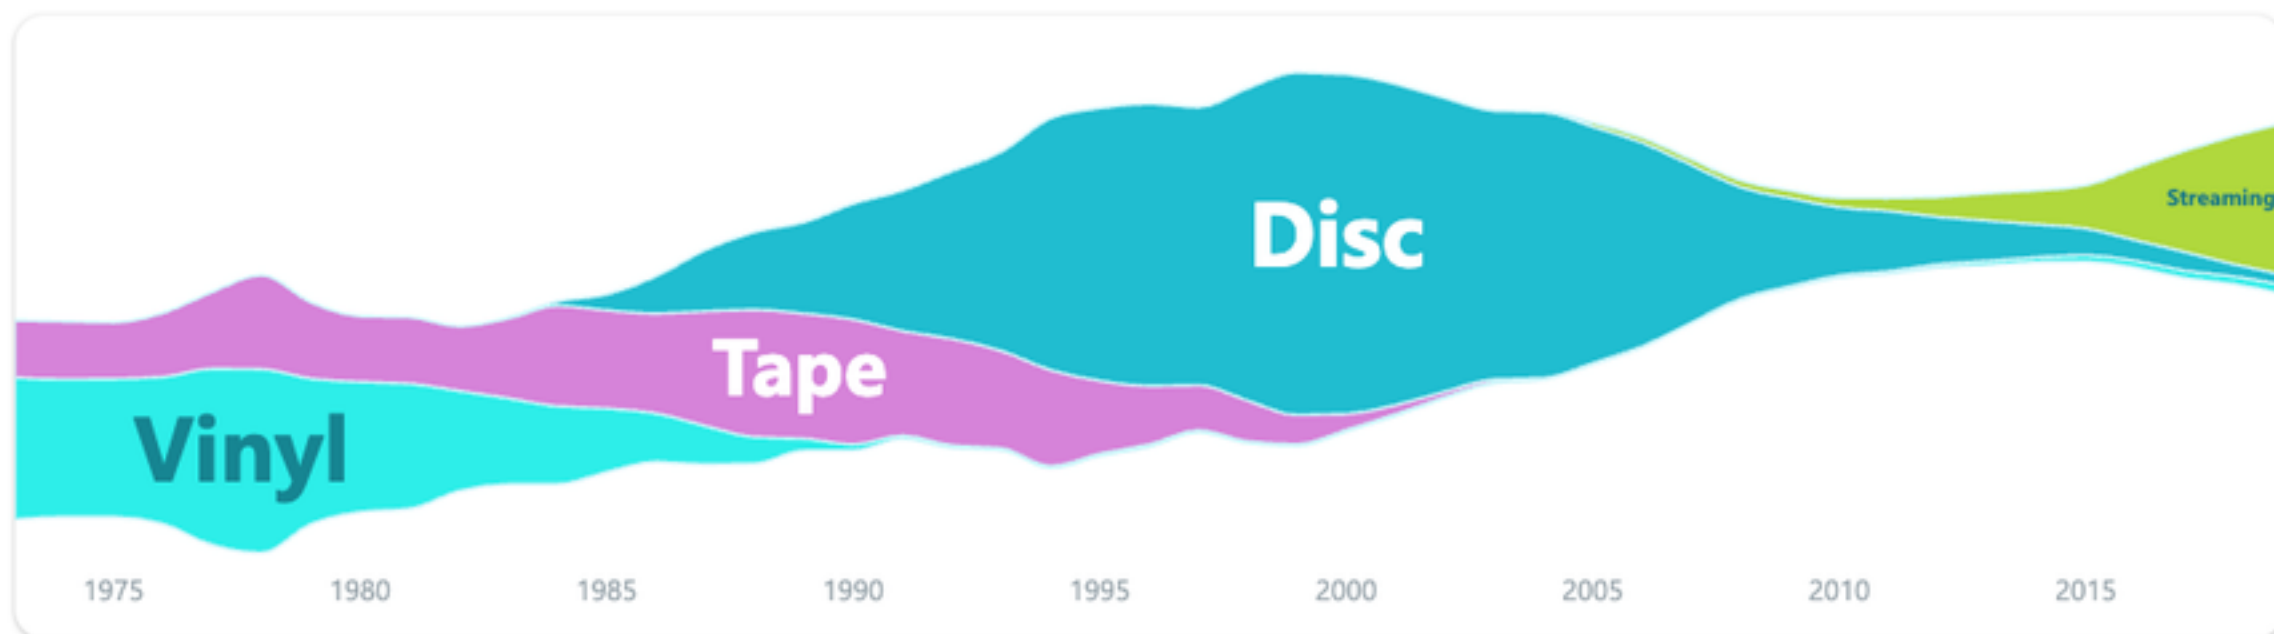

Stacked area – labels

The labels are placed automatically.

In the section "Labels" you can adjust the font-size, font color and font weight.

The label will have the maximum font-size, unless the area is too small. In this case, the label will be reduced, but never smaller than the minimum font size.

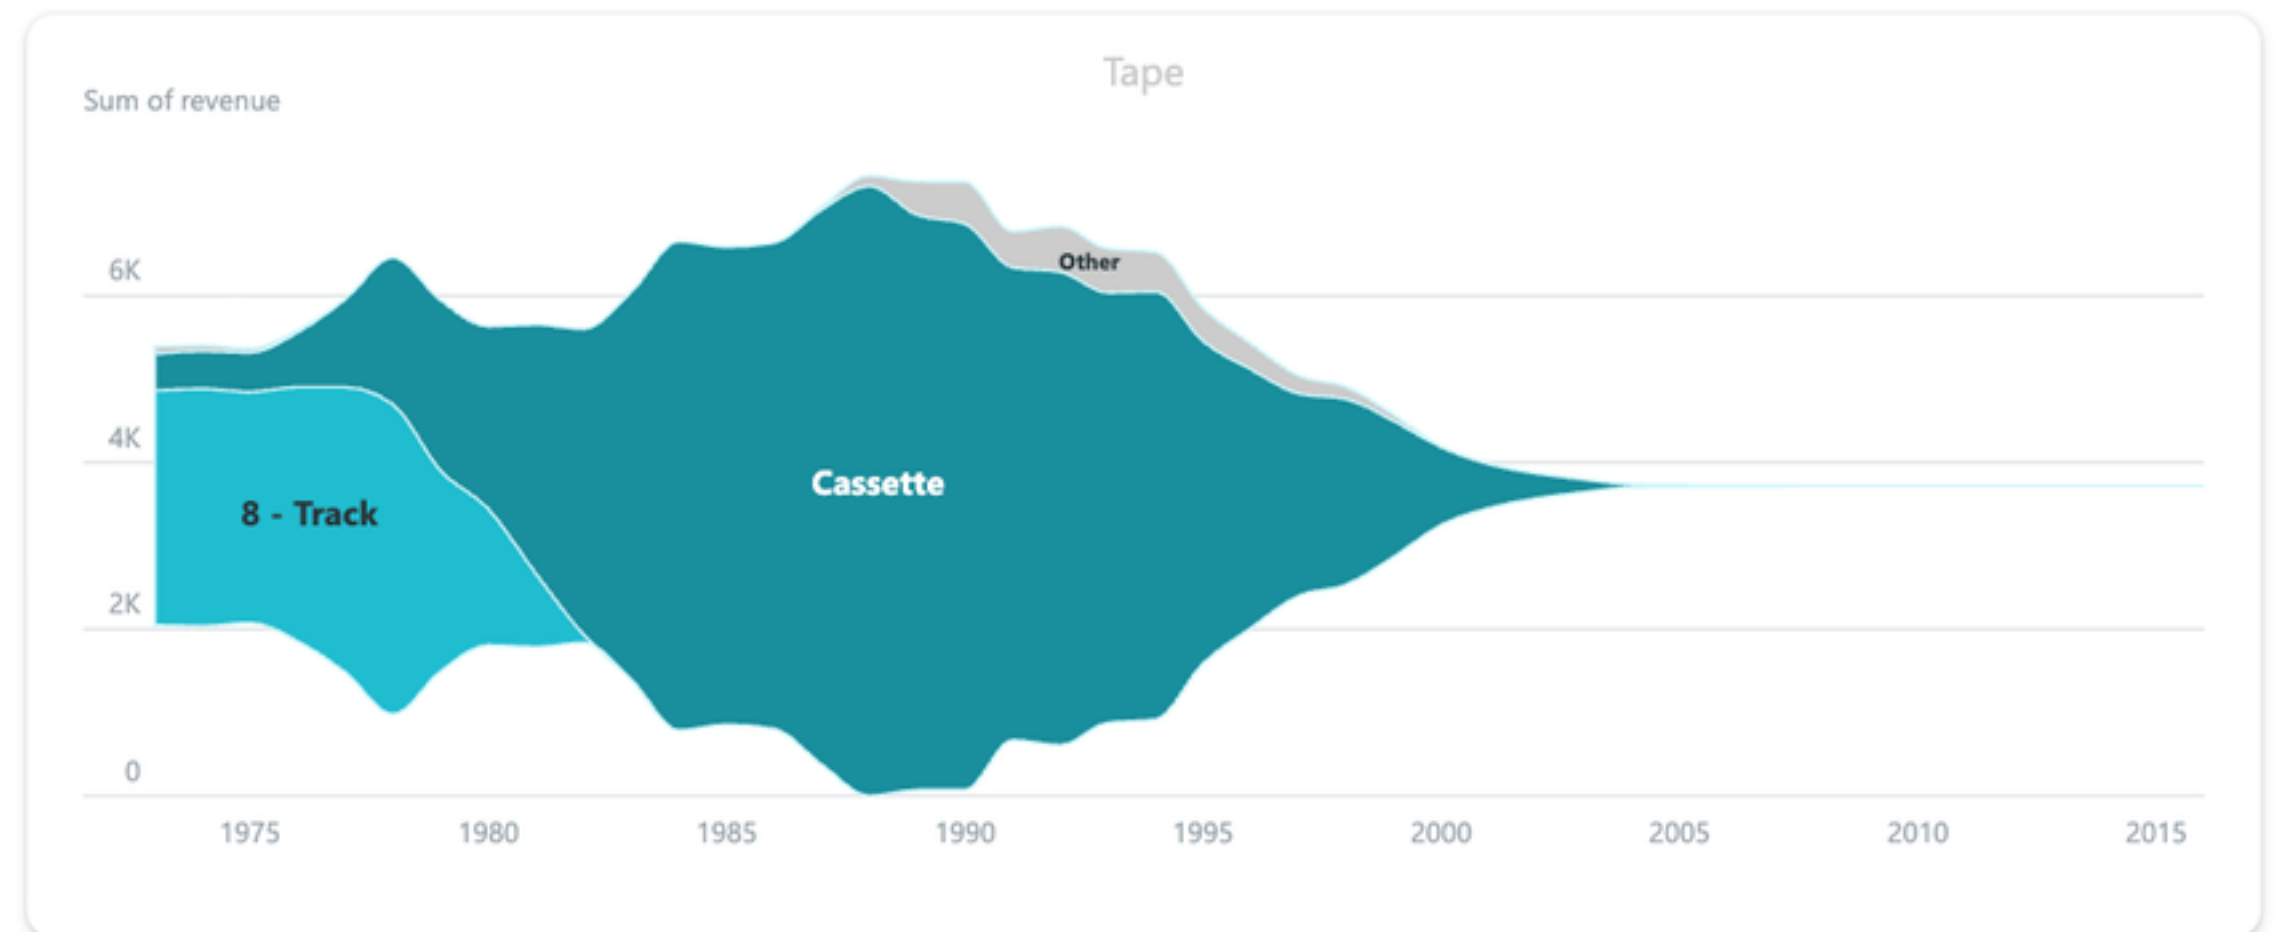

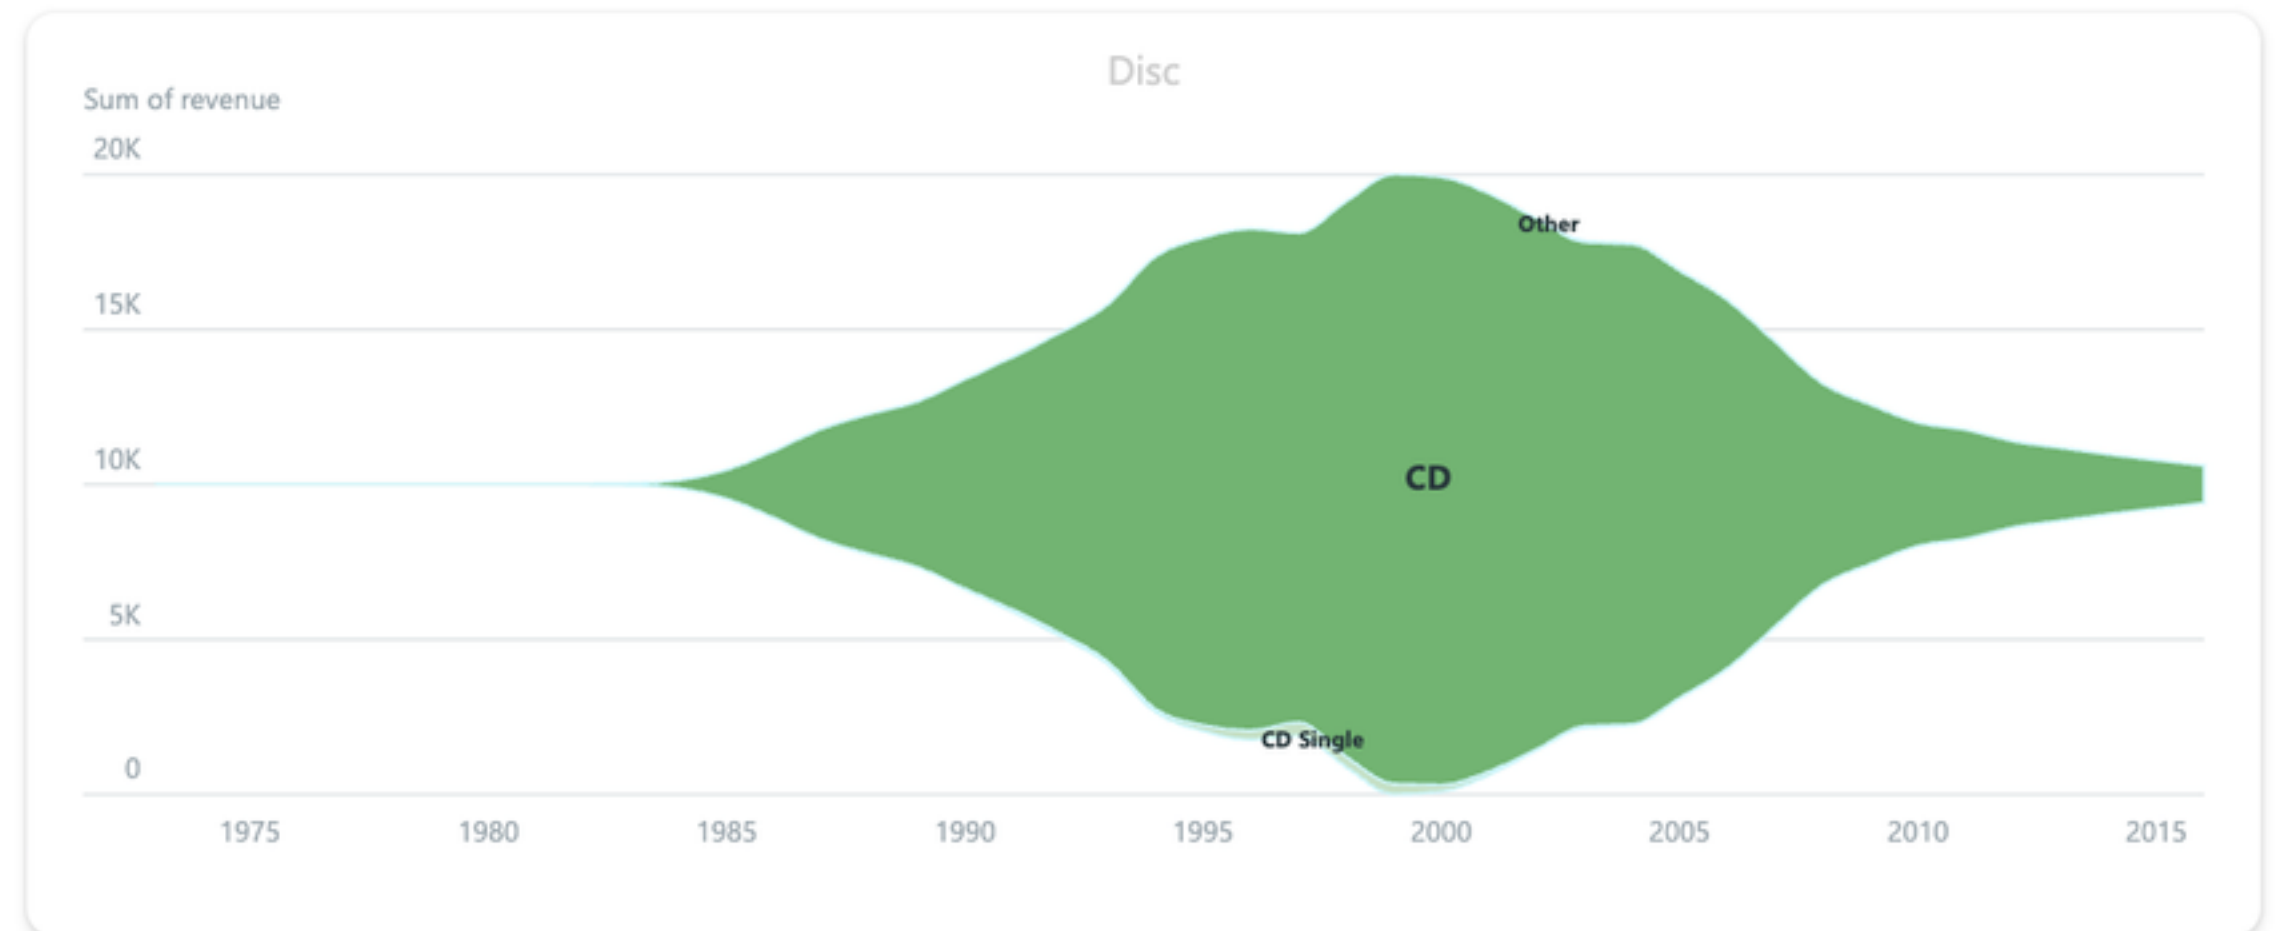

You can further adjust if labels that won't fit within their area should be removed or simply overlap canvas and other labels. Finally you can truncate labels to a certain character length and adjust the color contrast of the background color used by the segment.

2

Stacked area – multiples

Create multiple bump charts using a second dimension.

Stacked area – more features

r42 offers a variety of Power BI visuals with similar features. To learn more about how to get the most out of these visuals, visit our website.

Interactions

Slicing and tooltip settings

Formatting

Format numbers, dates and durations
